

# HCS

## Emesis Bags

HCS emesis bags are constructed of durable, lightweight polyethylene and are tear resistant. They feature a wide opening supported by a rigid plastic ring that ensures unobstructed access to the containment bag.

Just twist and hook the bag into the plastic support ring notch for a simple, one-step disposal of bag and contents.

The HCS biodegradable, green emesis bag features a unique, specially formulated EPI additive (TDPA) that accelerates the breakdown after proper disposal.

LATEX FREE
