

Patient ID Bands

Easy and proper identification of a patient is extremely important for the safety and satisfaction of both patients and staff members throughout medical facilities. The HCS Patient ID Bands are designed to help healthcare professionals accurately identify an at-risk patient.

Available in two color-coded classifications - Yellow "Fall Risk" and Red "Allergy" - these cost effective bands are made of a latex-free, soft vinyl material for patient comfort and provide large, easy-to-read text for clear patient classification.
